

Experiment 3

Student Name: Avreet Kaur UID: 23BCS12246

Branch: BE CSE Section/Group: KRG-3-A

Semester: 5th Date of Performance: 14/08/25

Subject Name: ADBMS Subject Code: 23CSP-333

1. Aim:

1. Generate an employee relation with only one attribute i.e., EMP_ID. Then, find the max EMP_ID, but excluding the duplicates.

- 2. Create two tables, Department(ID, name) and Employees(ID, name, salary, deptID). Then output the highest earners from each department.
- 3. Create two tables A and B with the attributes (EmpID, EmpName, Salary) and output the lowest salary of each employee across the two tables.

2. Requirements (Hardware/Software):

Microsoft SQL server

3. Procedure:

```
Q.1. Code:
CREATE TABLE TBL_EMPLOYEE(
EMP_ID INT
);
INSERT INTO TBL_EMPLOYEE VALUES (2),(4),(4),(6),(6),(7),(8),(8);
```

SELECT MAX(EMP_ID) as [Greatest Unique ID] FROM TBL_EMPLOYEE WHERE EMP_ID IN
(SELECT EMP_ID FROM TBL_EMPLOYEE GROUP BY EMP_ID HAVING COUNT(EMP_ID)=1);

```
Q.2. Code:
CREATE TABLE department (
  id INT PRIMARY KEY,
  dept_name VARCHAR(50)
);
-- Create Employee Table
CREATE TABLE employee (
  id INT,
  name VARCHAR(50),
  salary INT,
  department_id INT,
  FOREIGN KEY (department_id) REFERENCES department(id)
);
-- Insert into Department Table
INSERT INTO department (id, dept_name) VALUES
(1, 'IT'),
(2, 'SALES');
-- Insert into Employee Table
INSERT INTO employee (id, name, salary, department_id) VALUES
(1, 'JOE', 70000, 1),
(2, 'JIM', 90000, 1),
(3, 'HENRY', 80000, 2),
(4, 'SAM', 60000, 2),
(5, 'MAX', 90000, 1);
select d.dept_name, e.name, e.salary, d.id
from
employee as e
inner join
department as D
on e.department_id=d.id
where e.salary in (Select max(salary) from employee group by department_id);
Q.3. Code:
create table tbl_A (
empid int PRIMARY key,
empname varchar(20),
salary int
)
```

```
insert into tbl_A values (1,'AA',1000), (2, 'BB',300);
create table tbl_B (
empid int PRIMARY key,
empname varchar(20),
salary int
)
insert into tbl_B values (2, 'BB',400), (3,'CC',100);

select empid, min(empname) as empname, min(salary) as min_salary from
(select * FROM
tbl_A
UNION
select * from
tbl_b) as UNI
group by empid;
```

4. Output:

Q.1.

Q.2.

Q.3.

| Output: | | |
|---------|---------|------------|
| empid | empname | min_salary |
| 1 | AA | 1000 |
| 2 | BB | 300 |
| 3 | CC | 100 |

5. Learning Outcome:

- Understand the role of sub-queries in simplifying complex SQL operations.
- Apply sub-queries in SELECT, WHERE, and FROM clauses to retrieve specific data.
- Utilize sub-queries for filtering, aggregation, and conditional logic.
- Analyze query performance implications when using sub-queries versus joins.
